Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-21, 24, 25, and 28-32 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-22 of copending Application No. 11/101,886. Although the conflicting claims are not identical, they are not patentably distinct from each other because both sets of claims draw to a process for converting gaseous alkanes to liquid hydrocarbon by reacting the gaseous with bromine vapor. The copending claimed set does not specifically claim that the synthetic crystalline alumino-silicate catalyst is ZSM-5.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the process of copending claimed set by using ZSM-5 catalyst as a crystalline alumino-silicate catalyst because one of skill in the art would use any crystalline alumino-silicate catalyst including ZSM-5 with the expectation that any crystalline alumino-silicate catalyst would result in similar outcomes.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claims 1-21, 24, 25, and 28-32 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of copending Application No. 11/254,438. Although the conflicting claims are not identical, they are not patentably distinct from each other because both sets of claims draw to a process for converting gaseous alkanes to liquid hydrocarbon by reacting the gaseous with bromine vapor. The copending claimed set does not specifically claim that the synthetic crystalline aluminosilicate catalyst is ZSM-5.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
